

DEEPAKUMAR MAHESWARI

Rockville, MD | (480)-529-8451 | dmaheswa@asu.edu | [LinkedIn](#) | [GitHub](#)

SUMMARY

Full-Stack Developer and **MS Information Technology** graduate (**GPA 3.90**) with **2+ years** building cross-platform applications and **Human-Machine Interfaces** using **JavaScript/TypeScript, React, React Native**, and **GitHub**. Experienced with **2D/3D animation** frameworks (**Three.js, React Three Fiber, Lottie**) and design tools (**Figma, Blender**) to build **touch-based, operator-centric** interfaces with **real-time feedback**. Skilled at integrating **sensor data, device communication**, and **industrial interfaces** on **Linux** with strong **code quality, system architecture**, and **security** standards. **Problem-solver, detail-oriented, self-starter** who collaborates across multidisciplinary engineering teams. Recognized with **The Tech Whisperer Award** for exceptional engineering impact.

EDUCATION

Arizona State University, Tempe, AZ	05/2026
M.S. Information Technology, GPA 3.9 / 4.0	
Kadi Sarva Vishwavidyalaya, India	06/2024
B.E. Computer Engineering, GPA 3.55 / 4.0	

TECHNICAL SKILLS

- **Languages & Frontend:** JavaScript, TypeScript, React, React Native, Kotlin, Java, Python, SQL, C++, C#, HTML/CSS
- **HMI & Graphics:** HMI Design, UI/UX, Three.js, React Three Fiber, Expo Three, Lottie, Babylon.js, Blender, Figma, 2D/3D Animation, Touch-Based Input, Operator Experience Design
- **Hardware & Connectivity:** Sensor Data Integration, Device Communication, Android Networking (Wi-Fi, Bluetooth, BLE), Socket-Based Communication, Native Modules/Gradle, IoT, Network Security, Linux
- **Practices & Soft Skills:** GitHub, Code Quality, System Architecture, Security, Risk Assessment, Ergonomics, Problem-Solving, Detail-Oriented, Self-Starter, Multidisciplinary Collaboration, Leadership, GenAI Tools

WORK EXPERIENCE

Aramark, <i>Analyst {Software Analyst}</i> , Tempe, AZ	08/2025 – 05/2026
• Developed and refined HMI applications integrating sensor data, device communication, and touch-based controls using React, TypeScript, and JavaScript for 500+ users, driving 18% profit growth and 80% waste reduction, earning The Tech Whisperer Award for engineering impact. • Designed interactive 2D/3D animations and operator experience elements using Three.js and Lottie to visualize system states, considering ergonomics and workflow efficiency, accelerating delivery by 40% with GitHub version control. • Reduced resolution time by 60% by performing risk assessments for secure solutions, taking ownership of task completeness and timeliness, and collaborating with mechanical and electrical engineers to ensure hardware-software integration and long-term maintainability.	
devx AI Labs, <i>Software Engineer Intern</i> , Remote	01/2024 – 07/2024
• Improved application throughput by 25% by building cross-platform UI components with React, React Native, and TypeScript, integrating device communication frameworks for an e-commerce platform processing thousands of daily transactions. • Delivered 50% faster releases by maintaining code quality and documentation standards on Linux, applying system architecture best practices, and recommending more effective approaches in a fast-paced collaborative environment.	

PROJECTS

Industrial HMI & Touch-Based Control Interface React, TypeScript, React Three Fiber, GitHub, Sensor Data	
• Architected an HMI platform for industrial automation using React, TypeScript, and React Three Fiber, designing touch-based interactive visual controls with real-time feedback for 1M+ operator interactions. • Sustained 99.95% system reliability by integrating live sensor data and camera feeds with GitHub version control, and applying security and maintainability standards that reduced incidents by 40%.	
3D Animation & Robotics Visualization Engine Three.js, Babylon.js, Lottie, Blender, Figma, React Native	
• Built a 2D/3D animation engine using Three.js, Babylon.js, and Lottie to visualize robot movements and system states, designing assets in Blender and Figma for intuitive operator experience design. • Achieved 40% faster development by creating reusable React Native components, implementing Kotlin/Java Native Modules via Gradle, and applying human-centric design principles for safe, intuitive automation.	
IoT Device Communication & Network Security Platform JavaScript, TypeScript, Bluetooth/BLE, Wi-Fi, Linux	
• Developed a device communication platform supporting Wi-Fi, Bluetooth/BLE, and socket-based frameworks in JavaScript and TypeScript on Linux, sustaining 99.9% connection reliability. • Reduced pairing failures by 40% by implementing network security protocols and device pairing workflows, optimizing local communication for robotics/IoT systems with rigorous risk assessment.	

CERTIFICATIONS / AWARDS

Cloud Practitioner | Certificate | AWS
Data Engineering | Badge | AWS
The Tech Wishperer Award | Aramark
